

TRUMPF STYLE TOOLING 2017

SUCE IS.....

Since its inception in the 1950s as a small, but ambitious new business, SUCE has transformed itself over the years into a high-quality structured company specializing in the production of tools and dies. Ever-attentive to market developments and new technologies in this very particular sector, SUCE has also made a name for itself in the specialized fields of tools for punching machines, offering superior quality products and services. It is committed to finding innovative solutions to satisfy an increasingly international customer base.

SUCE's technical and competent staff, supported by the latest 2D and 3D design systems, and utilising the most superior materials and surface coatings available, facilitates the provision of equipment and tooling which in turn provides the greatest efficiency and productivity. SUCE's productive versatility is clearly demonstrated quite by the sheer extent of the items created by the business.

In this catalogue you can find standard and special tools for Amada, Trumpf, Euromac, Prima Power, Salvagnini, LVD, Muratec Murata Wiedemann, Durma, Ermaksan, Danobat, Boschert, Tailift, Rainer, Tecnology FPL, Haco.

SUCE is an important reference point in this specialized market area, and has is able to offer the latest solutions for the needs and the expectations of its customers.

SUCE would be delighted to support your company as the preferred specialist in this field.

Add on pag.50

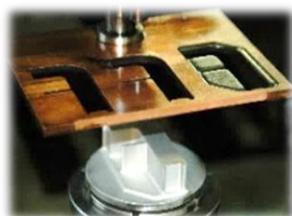

WHY SUCE?

Thanks to our project department, with 3 CAD station, we are able to design both standard and special tools.

The use of double grinding wheel plants allows for a very low roughness coefficient

No shape limitation thanks to EDM technology

The machine tooling dept. includes automatic lines of turning with load bars and milling machines

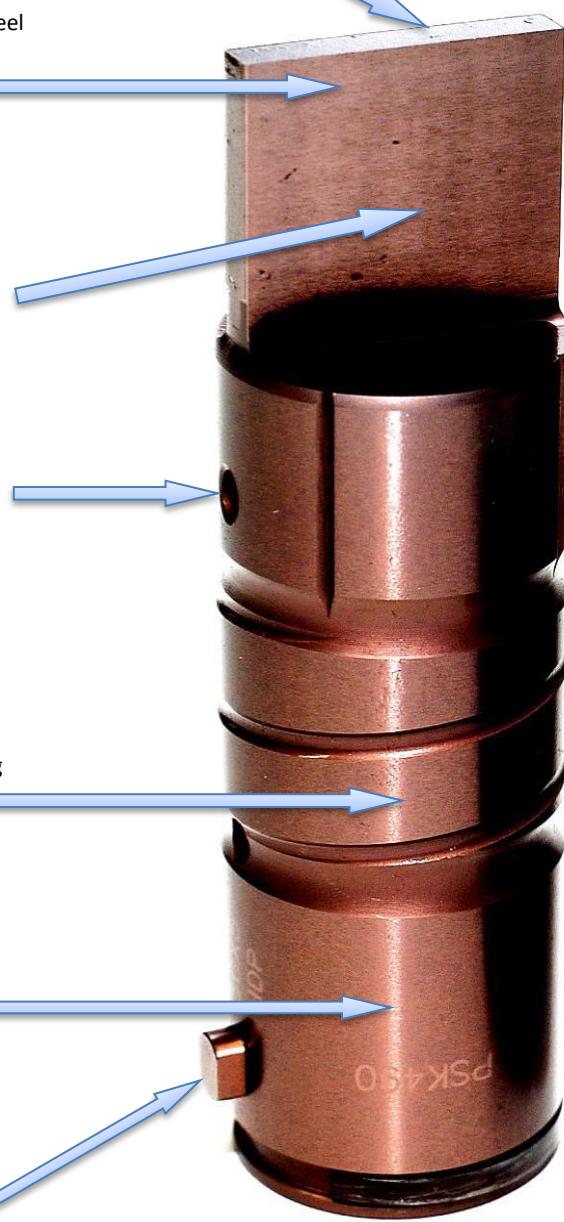

The use of the best steel available on the market by SUCE tools ensures a high standard quality and a long tool life.

10,000 items available on stock divided into 20 different categories

Die clearance

Die clearance is the total space between die and punch.

A correct clearance between the punch and the die assures normal wear of the tool and punching without defect such as: burrs on the piece in the case of excessive clearance and premature wearing of the tool and increased punching force in the case clearance being too small.

Material				
Thickness mm	Mild steel 16-20%	Stainless steel 18-24%	Aluminium 12-16%	Copper 10-14%
0,5 – 0,6	0,08-0,1	0,1- 0,12	0,06 – 0,08	0,05 – 0,06
0,8	0,14 – 0,16	0,15 – 0,2	0,1 – 0,14	0,08 – 0,1
1	0,16 – 0,2	0,18 – 0,24	0,12 – 0,16	0,1 – 0,14
1,2	0,2 – 0,24	0,24 – 0,3	0,15 – 0,2	0,12 – 0,15
1,5	0,25 – 0,3	0,27 – 0,35	0,18 – 0,24	0,15 – 0,2
2	0,34 – 0,4	0,36 – 0,45	0,24 – 0,3	0,2 – 0,25
2,5	0,45 – 0,5	0,45 – 0,55	0,32 – 0,35	0,25 – 0,3
3	0,5 – 0,6	0,6 – 0,7	0,35 -0,45	0,3 – 0,4
4	0,65 – 0,8	0,7 – 0,95	0,45 – 0,6	0,4 – 0,5
5	0,85 – 1	0,9 – 1,15	0,6 – 0,8	0,55 – 0,65
6	0,95 – 1,2	1,1 – 1,4	0,75 – 0,95	0,7 – 0,85

In case of blanking mild steel and stainless steel clearance is 15% of material thickness.

In case of blanking aluminium and copper clearance is 10% of material thickness.

Dies lock slug

SUCE lock slug dies eliminate slug pulling. This condition manifests where the slug returns to the top of the sheet during the stripping portion of the punching cycle. Because of this the slug comes between the punch and the top of the sheet on the next cycle, causing damage to the piece part and the tooling. How to avoid this problem?

The SUCE NO-SLUG has been designed with a reduction point of the shape below the surface so the slug cannot return once it passes through this point.

System E : 3 cuts with different angles insures the locking of the slug

Once the slug is separated from the punch, it is free to fall through the die. Slug pulling is eliminated. This solution isn't suggested with slug exhaust system machines ; AS lock slug design with protrusions is best solution with thickness more than 3mm, minimum cl for AS system is 0.15mm. SUCE Lock slug E and A system is a standard for all Suce dies, AS is on request , reduced land is a standard for thick turret dies rt80x5 rt80x6 rt110x5 rt110x6.

Add on pag.50

Tools sharpening

Before starting, make sure that punch and die cutting edge are in perfect condition. Accurate maintenance of the tools guarantees a normal wearing and the result of punching will be without residual burr and defects. Regular sharpening of the 0,1 mm punch and 0,2mm die guarantees a constant life time of tooling.

It is preferable that grinding operation is made with tangential grinding machine with adequate cooling in order to avoid tool tempering; after grinding it is necessary to demagnetize the tools with an appropriate demagnetizer. If a urethane ejectors is applied, restore the initial hole depth in such a way that the ejector can be compressed.

Punching force

Before starting ensure that punching force doesn't exceed the capacity of punching machine.

In order to calculate the punching force in kg , use the following formula:

$$\text{perimeter of the shape (mm)} \times \text{thickness (mm)} \times 4/5 \times \text{shear strength}^*$$

*mild steel 40-50 kg/mm² stainless steel 60-70 kg/mm² aluminium 20-25 kg/mm²

A sharpening other than the flat one reduces both punching stress and punching noise.

Therefore to ascertain the true punching force, multiply the pressure calculated using the above formula by the **sharpening factor**:

Sharpening height (mm)	Thickness (mm)					
	1-1,5	2	3	4	5	6
1	0,75	0,9	1	1	1	1
1,5*	0,5	0,6	0,7	0,95	1	1
3**	0,5	0,5	0,5	0,6	0,7	0,75

* standard shear height thick turret style

** standard shear height Trumpf style

The shear options

				
Double valley Cod 3P	Roof top Cod V	Inverted roof top Cod VR	Whisper Cod W	Four ways Cod 4P
Best option when shape is long, but susceptible to breakage	Best option when punching force is high, punching surface 75%	Best option for nibbling but inverted stresses could cause breakage	Recommended only for blanking (turret machine)	Recommended for round and square

Punches are flat, above shear are available upon request ;each type of sharpening reduces noise up to 50%

Add on pag.50

General rules

In order to optimize the use of tooling we would recommend the following basic guidelines:

- a) the punching surface does not have to be lower than 60% of the used punch surface.
- b) in case of nibbling minimum feed must be $0,5 \times$ thickness , smaller rd punch with thickness 1mm is 4mm , smaller rd punch with thickness 2mm is 6mm , smaller rd punch with thickness 3mm is 8mm.
- c) before exceeding tons capability calculate punching force with formula at page 7
- d) the tool dimension does not have to be lower than the material thickness and the shorter side must be at least 5% of the longest side.
- e) the advantage of the technical improvements of some models of dies punching penetration should be at least 2.5mm
- f) slitting tools must be appropriately sharpened and must have radius on corner (0,5mm).
- g) the use of the steels commonly called High Speed Steel for our punches allows the punching of any steel; however in order to increase considerably the punching effectiveness and reduce cold welds , apply some type of coatings such as TICN, HDP, FNC and use oil lubricant on sheet surface.
- h) be sure that tooling cutting edge are without seizing or cold welding material; if any , remove them with a diamond file.
- i) radius on punch corner is 0,25mm.
- j) delivery time: 2/3 days standard , 5/7 coating tools , some items are available at stock. 
- m) ordering specifications: machine type , form , thickness and material , dimensions , desired delivery

ISODUR

A tough, “long distance runner” with an optimum chemical composition

ESR electro slug remelting : a tried and tested remelting technology developed by Bohler gives the material the homogeneity it needs. A prerequisite for the best performance

ESR Manufacture improved service life due:

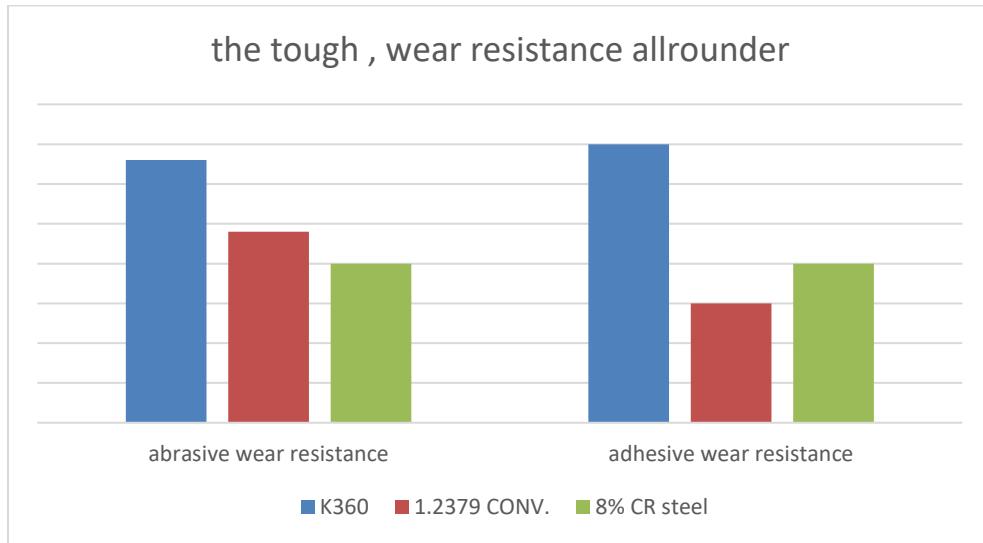

- Least possible inclusion content
- Lower micro and macro segregation
- Good homogeneity and higher degree of purity
- A homogeneous structure throughout the entire cross-section and bar length
- Producing larger bar dimensions at a constant carbide distribution
- Uniform correction of dimensions
- A broad range of application due to a high degree of toughness

K360 Chemical composition:

Carbonium	1,25%
Chromium	8,75%
Molybdenum	2,70%
Vanadium	1,18%

the tough , wear resistance allrounder

The new **K360 isodur** is a further development of the 8% chromium steels and has been developed to meet the needs of customers now more than ever. High toughness and, a remarkably high compressive strength, together with good resistance make this steel a real problem solver.

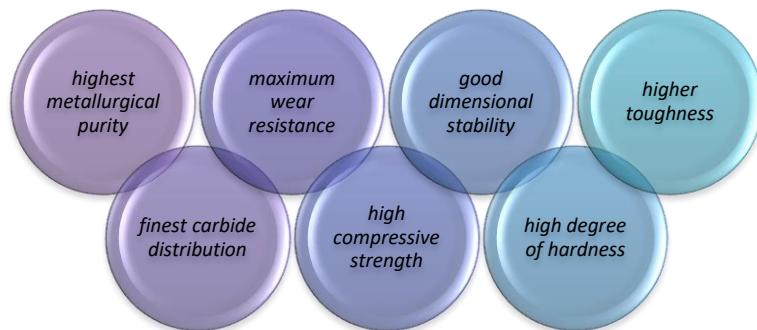

This steel is particularly outstanding when adhesive and abrasive wear resistance are necessary; it allows a considerable increase in performance , your productivity will increase and your costs per part will be reduced

Add on pag.50

Powder steel metallurgy

Today Suce provides, in addition to the traditional HSS punches, of new variety of tools, Trumpf style and Thick turret style made in powder steel metallurgical.

One of them is **K490**.

Research shows that the **K490 Microclean**, thanks to its chemical composition, is the best steel in the punching market. If you compare it with other powder steels, for example M4 and PM23, you will find that it assures twice the toughness with the same wear resistance.

This new material is characterized by:

- **A high adhesive and abrasive wear resistance**

More hits between regrind operations increases tool life , wear resistance double than traditional HSS M2

- **A high toughness** reduces risk of breaking the punch

In the catalogue POWDER STEEL punches are marked in RED , available items:

K490 Chemical composition:	
Carbonium	1,40%
Chromium	6,40%
Molybdenum	1,50%
Vanadium	3,70%
Tungsten	3,50%

Coating

HDP ACTION

high density plasma

Among other innovations brought by the HDP technology is a very versatile coating which can be widely used for various applications. HDP was developed to find a universal solution for the most traditional machining processes and to guarantee a constant yield and best performance of the tools.

Available with punches:

Trumpf, Amada, Finn Power, Euromac, Lvd, Rainer, Salvagnini, Tecnology, Wiedemann, Boschert, Tailift, Danobat, Durma, Ermaksan...

Test result

After 125.000 hits nibbling 1mm stainless steel coating is intact

CHARACTERISTICS:

- **Extraordinary toughness** - this is the strong point of this coating and makes it versatile and particularly suitable for various applications
- **Adhesion to the surface** - the HDP technology makes it possible to obtain maximum adherence of the coating to the surface and makes the "tool/coating" combination become a whole.
- **Microhardness** - the very compact HDP Red layer, with a thickness of only 3 microns, gives a hardness which represents a solid barrier against wear and guarantees a unique performance.
- **Low friction coefficient** - this is another important characteristic, which becomes evident thanks to the glossy layer. The low friction coefficient has been made possible thanks to the HDP technology which makes the application of coatings almost "dropletfree" (residual macro-particles on the surface). If they are not removed, these droplets affect the surface roughness.

Structure	MicroHardness (HV 0.05)	Friction coefficient (100 cr6)	Thickness (micron)	Deposition temperature (°C)	Max temperature (max°C)	Colour
Multilayer	3.800	0.25	1-3	480	400	RED

Add on pag.50

Coating

Double coating FNC

The double coating is obtained by overlaying the traditional TiCN with Movic self-lubricating coating.

MOVIC is a self-lubricating and anti-adhesive coating based on MoS₂ (Molybdenum), which is produced by PVD sputtering Magnetron technology.

MOVIC has been developed in the aerospace to find alternatives to traditional oils (eg oil, grease) when their use is not permitted and it has shown excellent tribological features that made it very interesting for a variety of new applications.

Available with punches:

Trumpf, Amada, Finn Power, Euromac, Lvd, Rainer, Salvagnini, Tecnology, Wiedemann, Boschert, Tailift, Danobat, Durma, Ermaksan...

SPECIFICATIONS:

- Self-lubricating single-phase coating based on MoS₂.
- "Soft" coating with very low coefficient of friction (friction coefficient in dry air <0.05).
- Single-layer coating that can be combined with any hard coating.
- Functional Thickness of Coating <0.5 microns.
- Deposition temperature <150 ° C.
- Soft wear residues, lubricants (behavior Fail-safe: no abrasive particles from wear of the coating).
- Excellent running for rough surfaces. (Coating becomes smoother during the running in.)
- Positive transfer of lubricant film on the side in contact.
- can be easily re-covered without removal. If necessary the removal is easily achievable.

Structure	Micro-Hardness (HV 0.05)	Friction Coefficient (100 cr6)	Thickness (micron)	Deposition temperature (°C)	Max temperature (max°C)	Colour

Sales condition

Availability of products in the catalogue is subject to change. Our sales department will check the availability of products before confirming your order.

Delivery :

The order confirmation provides an estimate of the date on which the order will be dispatched from the Suce warehouse. In the case of orders requiring an advanced payment we will provide an estimated delivery date as soon as we receive confirmation of payment.

Minimum invoice value : €100

Payment :

Payment terms are detailed in the order confirmation. Our finance department may charge interest on payment received more than 10 working days after the payment dead line.

Freight : according to Incoterms rules and are detailed in order confirmation

Cancellation , returns and complains :

Any claims will be considered if made within 2 weeks of receiving the goods. The return of materials must be authorized and managed by Suce. A return charge of 20% of the product's value will be applied to cover the costs of return.

Cancellations can be made free of charge up to 24h after order confirmation. Cancellations made after 24h could be subject to a charge.

Credit :

Customers with a credit account should be aware of their credit limit. Our finance department will provide instructions in the event that your order exceeds your credit limit.
